**Crop Residue Breakdown**

## *Huma-Tec*

Liquid Humic Acids Extract

Humic Acids .....12.0%

**Improves Production**

Derived from: Mined leonardite mineral deposits. Contains Humic, Fulvic and Ulmic Acids.

### **- Apply in the Fall for Best Results -**

A residue recycling program using Huma-Tec will improve Springtime planting conditions and help make nutrients available for the next crop.

Huma-Tec contains a concentrated complex of humic acids, cultured soil bacterias and trace minerals— a combination that works especially well for residue breakdown.

A broadcast application of Huma-Tec restores and enlivens tired, worn out soils. This product is a great tool for both no-till and conventional farmers because it not only breaks down crop residues, it also helps put oxygen back in the soil, take out hardpan and open the soil for accepting and storing valuable moisture.

Huma-Tec stimulates an organic decay system that uses Winter and Spring moisture to re-establish good soil life, improve soil tilth and convert carbon into plant food. Remember: The source of all carbon is from the decay of organic matter. Since organic matter is 58% carbon, the proper decay of your crop residues adds a priceless fertilizer that can't be purchased in town!

**Application**— Broadcast (field sprayer, center pivot, etc.) on bare soil, crop residue or dormant plant life 1 to 2 gallons for the following results: **1)** To help regenerate or enliven heavily farmed or drought stressed soil. **2)** To cleanse soil of chemicals, salts, harmful plant toxins. **3)** To control or eliminate harmful pathogenic soil life while restoring good soil life. **4)** To free up and make available various nutrients and minerals. **5)** To mellow soil; breaks-up hardpan/plowpan and breaks-down crop residue.

Huma-Tec is also excellent in the row, on the seed. It's unique blend of micro-nutrients encourage germination and help to establish a large, hardy root mass.

*Huma-Tec is a versatile product of the highest quality that's very easy to work with; homogenized and screened thru a #100 mesh screen means no plugging of nozzles.*

# Crop Residue Recycling Program

Breakdown residue with a Fall application that can be applied with either sprayer or center pivot. Easy to use product can also be applied with burndown herbicide! The Residue Recycling Program is a cost effective solution that has a bottom line return for both no-till and conventional farmers.

## Benefits Include—

- ▶ Speeds up crop residue breakdown.
- ▶ Improves soil tilth and reduces compaction.
- ▶ Recycles stubble & straw into nutrients for the coming season.
- ▶ Improves water infiltration and retention, builds soil moisture profile.
- ▶ Improves Spring planting conditions and enhances nutrient uptake.
- ▶ Helps release calcium and phosphorus from the soil.
- ▶ Benefits accumulate— maximize benefits with yearly applications.

Converting residues has multiple benefits that can result in improvement of yields and reduction of overall input and operating costs. For best results this program should be used in combination with US Ag's complete product line. Call today for more information or to place your order.

**Can Improve Overall Crop Production!**
